

SOLUTIONS

The unique NUTec NUBis Bulk Ink System ensures a continuous supply of ink to Epson® DX™4, DX5, DX6 and DX7 print heads, allowing more efficient printing with uninterrupted refilling, giving the functionality of a cartridge but with the advantages of a bulk system.

The NUBis system holds 2 x 1000ml degassed pouches, which are easy to replace when empty, even during printing without disrupting the print session.

Degassed pouches are generally more efficient especially when printing at high speeds and as such are more reliable than any conventional open bulk ink system.

Replacing pouches can be done quickly and cleanly: The system connector needles attaches easily to the nozzle of the pouch for a fast, spill-free refilling process, reducing ink wastage. Empty pouches can be folded, taking up less space, while the outer box is 100% recyclable.

NUbis FEATURES

- Continuous Ink Supply
- No mess during refilling
- Increased printing efficiency - Cost effective
- Refilling without interrupting printing
- Degassed ink for more reliable and efficient printing
